

final_project_pagination_plan

- Which pages in your Final Project will include pagination features? Why these? Why not others?

I plan to do a project about the library system, including book storage, student management, borrowing and lending records and so on. I'd like to use paginations in those parts, because the books, students and records will have a large number of data.

- How many rows of data will you need to populate in the database tables in order to test the pagination features?

I will populate about 40 rows of data in order to test the pagination features.

- Where will you get or how will you generate the test data values?

The books and names will be generated randomly by excel or python.

- How could you adapt the data migration code used in the first part of this assignment to load test data values of your own?

I will use the functions and data patterns in the start files of '0004' and change it to fit my data patterns.
